Investigative Case

On 10/10/2019, a 34-year-old male was brought to the emergency department by ambulance. The patient was found by his neighbor who reported that he was unconscious and not responding to stimuli. The patient was brought to the hospital and arrived at the emergency department at 11:00 PM.

The patient's medical history is significant for hypertension, diabetes mellitus, and chronic kidney disease. He is currently taking lisinopril, metformin, and furosemide. He has no known drug allergies.

On physical examination, the patient is a 34-year-old male with a body mass index of 28. He is alert and oriented to person, place, and time. His vital signs are stable. His physical examination is unremarkable.
